

4x4 Industrial Bypass Optical Switch

Product Description

The 4x4 Industrial Bypass Optical Switch utilizes fiber-to-fiber technology over an angled surface to achieve ultra low losses and crosstalk. It is suitable for all bi-directional protection switching applications where premise-side connectivity is not required in the bypass state. Compact and competitive cost, this optical switch provides excellent performance on your network. Lightwave Link 4x4 Industrial Bypass Optical Switch fully complies with RoHS Directive 2002/95/EC (2008/385/EC).

Physical Dimension

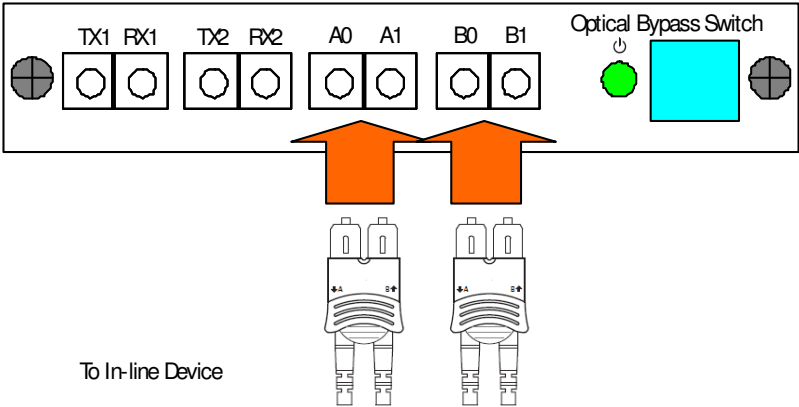

Connecting to the network

1. Connect Network Port A (1/2) to the appropriate switch, server or router device.
2. Connect Network Port B (3/4) to the appropriate switch, server or router device.
3. Verify that the Bypass Switch Network Ports are cabled in-line between two devices.

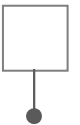

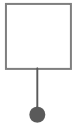

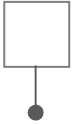

Connecting to the in-line device

1. Connect In-line Port A (A0/A1) to the in-line device using a LC/PC fiber cable.
2. Connect In-line Port B (B0/B1) to the in-line device using a LC/PC fiber cable.
3. Verify that the Switch In-line Ports are cabled in-line between two devices.
4. Connect the control cable or power supply to the switch. If you are installing the module with DC jack, make sure you connect the switches' power supply to the same power sources that in-line appliance is using.
