

Specification for High Efficiency Pulse Compression Transmission Grating, LSFSG-1000 series

Crafting light for the Information Age

LightSmyth Technologies' transmission gratings are fabricated on fused silica substrates and robust dielectric films by state-of-the-art projection photolithography and reactive ion etch. These high fidelity semiconductor fabrication methods enable precise realization of sophisticated proprietary grating designs that provide diffraction efficiency close to 100% and line spacing control to 1 part per million.

No other grating technology is capable of achieving this degree of performance combined with the cost effectiveness and reproducibility afforded by semiconductor volume fabrication technology.

Left: Typical absolute diffraction efficiency of 1000 grooves/mm Transmission Grating.

Features:

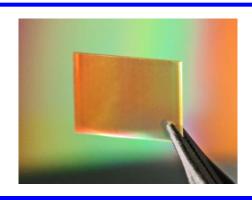

- Very High Diffraction Efficiency.
- Low Polarization Sensitivity.
- Excellent Feature Fidelity and Groove Uniformity.
- Only fused Silica and robust dielectrics are used, no polymers.
- Extreme environmental stability. Telcordia qualified.
- Each grating is a master: low light scatter, no ghosting.
- Very competitive pricing.
- Strict quality control. LightSmyth is ISO 9001:2008 certified.

Applications

- Pulse Compression
- Beam splitters/combiners
- Spectroscopy
- Remote Sensing

See the next page for technical specification

Specification for High Efficiency Pulse Compression Transmission Grating, LSFSG-1000 series

Crafting light for the Information Age

Optical					
Description	Value	Units			
Line Density	1000.0	Lines/mm			
Line Density Uniformity	0.001	Lines/mm			
Angle of Incidence (AOI) 1	31 ± 1	۰			
Wavelength Range	1040±20	nm			
Optimal polarization ²	Any				
Diffraction Efficiency ³	>94	%			

¹ Optical grating performance will remain substantially similar over a 5 ° variation in angle of incidence.

Worst case in the operational wavelength range for optimal polarization.

Mechanical				
Dimension tolerances	±0.2 for grating size and width			
Substrate Thickness	0.675 ± 0.050 mm			
Material	Fused silica, dielectric layers			
Scratch/Dig ⁴	60/40 standard, 40/20 and 20/10 custom			

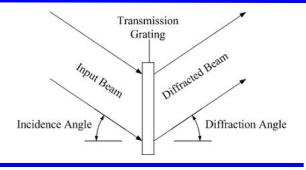

⁴ as per MIL-PRF-1380B in the clear aperture; no requirements outside of the clear aperture.

Substrate dimension options					
Part number	Substrate width, mm ⁵	Substrate height, mm ⁵	Clear aperture width, mm ⁶	Clear aperture height, mm ⁶	
LSFSG-1000-3212-94	31.8	12.3	30.8	11.3	
LSFSG-1000-3225-94	31.8	24.8	30.8	23.8	
Custom dimensions	Any rectangle fitting within 135 mm diameter circle (e.g. 130 x 20 mm)				

⁵ Width is perpendicular to grating grooves, height is along the grating grooves.

Typical Optical Layout

The transmission grating is designed to operate in Littrow configuration, where the angle of incidence and diffraction are the same for the central operational wavelength. Light is dispersed in the plane perpendicular to the grooves.

² p-polarization: electric field vector is perpendicular to the grating lines; s-polarization is orthogonal to p.

⁶ Clear aperture is centered on the substrate.
