

STANDARD INFRARED BANDPASS FILTERS

Optimizing Design for Infrared Analysis of Selected Spectral Regions

- Isolate infrared spectral region of interest
- Increase signal -to-noise in desired spectral region
- Coatings designed to fully reject unwanted spectral domains

Bandpass Filters are used to selectively transmit a portion of the spectrum while rejecting all other wavelengths. The Spectral Systems Standard Bandpass Filters are designed to provide highest transmission in your spectral region of interest and deep rejection of unwanted energy from adjoining wavelengths.

Our filters are fabricated from hard, durable first-surface dielectric coatings on optical-quality, IR transmitting substrates. These filters will withstand normal cleaning and handling associated typical of optical components.

Optical Bandpass Filters are useful for a variety of applications including fluorescence microscopy, spectroscopy, clinical chemistry and spectral imaging and are typically used in the life science, industrial, or R&D industries.

The Spectral Systems IR Bandpass Filters are available with many bandpass regions of interest. Please contact us for other requirements you have.

SPECIFICATIONS

Diameter	25mm
Diameter Tolerance	+0/-0.1mm
Min. Clear Aperture	21mm
Thickness	1.0mm
Thickness Tolerance	± 0.2mm
Transmission (Typical)	60-80%
Blocking	t<0.1% average to 30 μ
24-Hour Humidity	Per MIL-C-48497A
Moderate Abrasion	Per MIL-C-48497A
Adherence	Per MIL-C-48497A

Notes: The blocking range for some filters does not reach the full long wavelength region of the mid-IR spectral region. We recommend in these cases the use of an additional optical element such as CaF₂ available from Spectral Systems
